I think the game's overpriced, and the developer needs to do some balancing and bug patches, but it's a unique mechanic, and it's fun.

Recommend switching the control scheme to "rotation" vs the default (which I cannot understand at all).

The game is functionally really short and easy, but the mechanic is fun to play around with, and you can theoretically get the sword to cover the whole screen if you're into grinding for something that has actual payoffs other than numbers.. I want to like this game. I bought it after finishing a run of Ginormo Sword, thinking it would scratch the same itch. And in some ways it does. You can make your sword big, and the attacking mechanics are (slightly) more involved.

But you can beat it in under an hour. There's no elemental damage and minimal enemy variety. The good psi powers are redundant by the time you get them. And multiple achievements are straight broken, refusing to unlock even when you satisfy the conditions.

On top of all this, the developer seems to have abandoned the game; the achievements have been broken for over a year.

Steer clear.. You know Cloud from FFVII and his big Buster Sword? Yeah, take that and multiply the size of it by 9000 and you get this game with no physical drawbacks. It's a short game but does what it intends to do in that timespan; to make you feel like a god damn overpowered protagonist.

10/10 looking forward to what else this developer makes.
